Marseille | Remote | Relocation possible • kolya.kolombet@gmail.com • [GitHub](#) • [LinkedIn](#) • [Portfolio](#) • 06 95 18 76 54

Backend-focused Full-Stack Software Engineer with 7 years of experience, 6+ of them building payment systems in Java and JavaScript at a Canadian P2P payments platform, with contributions to the open-source framework it runs on. Built transaction reconciliation, real-time limit calculation, KYC automation and event-driven webhook processing for a service moving CAD 10M+ per week. Currently building multilingual web applications in Next.js. English C1 (IELTS).

PROFESSIONAL EXPERIENCE

Independent Development & Professional Development

February 2026 – Present • Marseille, France

- Designing and building a multilingual portfolio and e-commerce website in Next.js (App Router) over a PostgreSQL database, covering internationalised routing, schema and content modelling, and the full front-end and back-end implementation.
- Providing freelance development support on a collaborator's web project; studying French to B1 level, in progress.

Full-Stack Software Developer — Nanopay (P2P payment platform), Toronto, Canada

December 2019 – January 2026 • Remote

Technical environment: Java (FOAM framework), JavaScript, REST, webhooks, JWT, CircleCI, Git, Jira, Agile/Scrum.

- **Open-source contributor to [FOAM3](#)**, the framework the platform is built on: referral code generation, XML parsing with enum and array handling, schedulable run-scripts, large-file persistence and DAO/document handling, referral, payment, KYC and approval-flow features, and bug fixes across the core framework and UI.
- **Foree Remittance (2024–2026)**: built onboarding, transaction processing and email notification components for an international remittance product serving 2,000+ active users and over CAD 10M in weekly transfers.
- Designed and implemented an automated reconciliation system in Java for 100–500 daily transactions between the platform and partner banks, with automatic retry of transactions left unreconciled on a given pass, cutting manual verification by over 90%.
- Built and deployed a real-time transaction limit calculation engine in Java that accounts for partner bank availability, user-specific constraints and time-based windows.
- Replaced a high-frequency polling mechanism (1 request/sec/transaction) with an event-driven webhook architecture in Java, cutting redundant API calls by 90% and sustained backend load.
- Automated identity verification inside the transaction flow by integrating third-party KYC providers, payment systems and internal backend services, delivering automated real-time validation in under 1 second.
- Developed features across a modular service architecture of roughly 200 services within a single Java codebase, covering backend services and REST API design.
- Wrote unit tests (FOAM test framework) alongside feature work; every pull request ran through CircleCI and peer code review before merge.

Data Scientist, Co-op — eSentire, Waterloo, Ontario, Canada

April 2019 – August 2019 • Conestoga College co-op placement

- Contributed to the development of neural networks for classification and recognition tasks using Python and TensorFlow.
- Worked closely with designers to implement the front-end presentation of the results.

TECHNICAL SKILLS

- **Programming Languages:** Java, JavaScript, Python
- **Backend & APIs:** FOAM framework, Node.js, Next.js, REST API design, webhooks, event-driven architecture, JWT authentication
- **Frontend:** React, HTML5, CSS3
- **Data:** PostgreSQL, SQL, relational data modelling; proprietary in-memory indexed datastore (red-black tree based)
- **Testing & Delivery:** Unit testing (FOAM test framework), CircleCI (CI on every pull request), Git/GitHub, code review
- **Tools & Practices:** Docker, Linux, Jira, Postman, Agile/Scrum
- **Spoken Languages:** Ukrainian (native), Russian (native), English (fluent, C1 — IELTS 2018), French (B1, in progress)

EDUCATION

Master of Informatics — Vilnius University, Lithuania • Sept 2022 – June 2024, completed while working full-time at Nanopay. Thesis: Multi-prover Ethereum Layer 2 Rollups.

Computer Applications Development, Post-Graduate Co-op — Conestoga College, Canada • Sept 2018 – Aug 2019

Bachelor of Computer Science — Igor Sikorsky Kyiv Polytechnic Institute, Ukraine • Sept 2014 – June 2018
